                                                                                                                                              A novel human protein (899558) induces interfer m-vamma (IFN-vamma) prodn. by immunocompetent orbits to pendances the cylosockery of killer cells and/or induces the formation of killer orbits (c.u. NK cells, lymphokine-antivating killer (IAK) orbit, and mythtwin Troplis). Recombinant IFN-vamma induced protein can be produced in high yields using host cells, esp. Escherichia cell, transformed with a vector carrying the encoding cDNA (T32402). It is useful as an antiviral antitumor, antibacterial, immunoregalatory and blood platelet enhancing adent, and can be used in adeptive immunorhorapy it is also used to raise monoclonal antibodies. A full length sequence is given in R99560.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PCR amplification of the CRNA (see also TR2404-10) and expression in Escherichia coli XI-1 Blue MEPTEAN allowed product of invombination inducer protein. This was used to construct hyperagonal antipolity produced anti FEN-gamma inducer protein monoclonal antibody H-ImAL useful in the detection and purification of the inducer principles (see also R99558).

                                          Example A-2-2: Page 36-37, 18pp, English.
A dovel mouse protein (R99559) induces interferon-gamma (IFN-gamma) prodn by immunocompetent cells. Its sequence was deduced from that of a cUNA colone (13447) (solated from a mouse liver library becombinant IFN-damma induces protein can be produced in high yields using host wells sep Exchericable coll, transformed with a vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA encoding interferon gamma prodontinducing polypeptide to treat and prevent, e.g. viral disease, malignancies and disorders

Page 41-42; 48pp. English.

The mature portion of a novel bullar protein (64550); indexes interferon gamma (IEM-yaumma) product. by immunocompetent cells. I interferon gamma (IEM-yaumma) product of a cNA clone (732404) ebtd. from a numun liver likrary. The protein enhances the greatextity of Relice relis and/or induces the formation of Killer cells (e.g. NE cells, and/or induces the formation of Killer cells, and cytocoxic Toelis, lymphokkine-activating killer (LAK) cells, and cytocoxic Toelis, lymphokkine-activating killer (AEK) cells, and cytocoxic Toelis, antitumor, antibacterial, immunocepalating and blood platelet enhances are in 1981 to be used in adoptive immunocthorapy. It else used to raise menocolonal antibodies.
                                                                                                                                                                                                                                                      Example A:3.6; Page 17: 48pp; English.

Example A:3.6; Page 17: 48pp; English.

Fryptic peptides (R9956) and R99562; correspond to amino acids 79:10: 10.7 £140. Experitively, if a novel interferon gamma (ITN-quamma) inducer protein identified in mouse liver. The fertile acids and interferon per protein for mouse liver of that were utilized in the amplification of mouse liver cDNA, leading to the isolation of a clone (IT2403) coding for mouse IFN-gamma the isolation of a clone (IT2403) coding for mouse IFN-gamma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Interferor gamma inducer protein tryptic peptide (ua26:43). Interferon gamma inducer protein: IFN-gamma: antiviral; virucide; antitumour; antibactorial; immunoregulator; adoptive immunotherapy

This sequence represents a protein which induces interferon-gamma production in immuney expetent defits. This protein may be used as the major component in a drug for the prevention and treatment of e.g. malianant tumours, wiral diseases, bacterial into tions and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             J09157180-A.

PS Chaim is the protein sequence of interferon gamma inducing factor-2
CC (JOSP-2). An IOSP-2 variant (W2775) and an IOSF variant (W22049).
CC Which has been a literate transcript, also exist. Probes derived from the nucleic acid sequences can be used to guantify the expression of COSF-2 in conditions that are associated with inflammation or aberrant expression of IOSF-2. The protein can be used to screen for compounds that interfact with IOSF-2, such as antibodies, antagonists or other can interfact with IOSF-2 such as antisense sequences) of COSF-2 (Maintip: The protein can also be used to diagnose, provent of treat IOSF-2 (Maintip: The protein can also be used to diagnose, provent of treat IOSF-2 (Maintip: The protein can also be used to diagnose, provent of treat IOSF-2 (Maintip: The protein can also be used to diagnose, provent of treat IOSF-2 (Maintip: The protein can also be used to diagnose, provent of treat IOSF-2 (Maintip: The protein can also be used to diagnose, provent of treat IOSF-2 (Maintip: The protein can also be used to diagnose, provent of treat IOSF-2 (Maintip: The protein can also be used to diagnose, provent of treat IOSF-2 (Maintip: The protein can also be used to diagnose, provent of treat IOSF-2 (Maintip: The protein can also be used to diagnose, provent of treat IOSF-2 (Maintip: The protein can also be used to diagnose, provent of treat IOSF-2 (Maintip: The protein can also be used to diagnose, provent of treat IOSF-2 (Maintip: The protein can also be used to diagnose, provent of treat IOSF-2 (Maintip: The protein can also be used to diagnose, provent of the can also be used to diagnose and the can a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PS Claim 3: Page 7: 60pp; English.

CC This protein sequence represents an interferon gamma inducing factor-2 (IGIF-2) variant. Identified from a liver cDNA library. This sequence coldities from IGIF-2 identified from a I-lymphocyte cDNA library (Mid47), in that amino acid 140 is found to be changed from Arg to Ile. A second colditary, W27843, also exists. From the function acid colditary represents the representation of IGIF-2 in conditions that amino acid to year tip the expression of IGIF-2 in conditions that are associated with inflammation or abstract expression of IGIF-2.

The protein and moved to serve for compounds that interact with the protein and moved to serve for compounds that interact with the protein and in the sequences) of IGIF-2 expression or activity. The protein and its to sequences of IGIF-2 expression or activity. The protein also be used to diagnose, nevert or treat IGIF-2 induction of prohiferation of ifferentiation or maturation of leucocytes or compounds that interact with inflammation. differentiation or maturation of leucocytes or lymphocytes, reporting in relation to tissue damage associated with inflammation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 pri immuno:competent cells useful for adoptive immuno:therapy of pri tumours and as antimicrobial agent etc.

Pri tumours and as antimicrobial agent etc.

Pri tumours and as antimicrobial agent etc.

Critic private sequence represents a newel protein from monse liver cells.

Critic private sequence represents a newel protein from monse liver cells.

This private form quanta (IR garma) production in immunocompetent cells in the private sequence of the limit mour for antition of the first private (including antition) or antibacterial agent.

Critic formation: It is used as an antitionation agent for antitionour and in the treatment of atapic or immune system discourse; e.g. assimated and in the treatment of atapic or immune system discourse; e.g. assimated and in the free memorian. When formalisted with interleuktion it is also used to treat leukepaenia and thrombocytopaenia associated with radiotherapy or chamotherapy of leukapaenia and other cancers, when used to antition of the protein significantly improves the interleup of allower with the rediction (before sequence 157 AA).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gilwadi,
```

A; Gene:

yloN

Dauperfamily: conserved hypothetical protein HI0365

C; Genetics:

A:Experimental source: strain 168

NID: 12637 (02)

A; Molecule type: DNA A; Residues: 1:363 < KUN>

A;Status: preliminary; nucleic acid sequence not shown; translation not slown

```
Claccession: #69878

Claccession: #69878

Title: Perfect score. Scoring table. BLOSUM62

Tible regs. Destable residues

SwissProt_36:*

Pred. No. is the number of results predicted by chance to have a score dreater than or equal to the score of the result being printed, and is decreed by analysis of the total score distribution

Claim. ) Faue 46: 60pp; English.

FS. Claim.) Faue 46: 60pp; English.

CO. (161F-2). An 161F-2 variant (#217F2) and an 161F variant (#21049).

CO. (161F-2). An 161F-2 variant (#217F2) and an 161F variant (#21049).

CO. the negligible acid sequences can be used to quantify the expression of the negligible acid sequences can be used to quantify the expression of the farmy filles that are associated with inflammation or aberrant party in a 171F-2. The protein as antibodies, antagonists or other contability interpression as antibodies, antagonists or other contability in the protein can also be used to diamnze protein or expression or activity. The protein can also be used to diamnze protein or trait 181F-2 if duction if protein also be used to diamnze protein associated with inflammation.

23. MAY 1998 (fise entry)
Amino acid sequence of human interleukin-1-gamma.
Amino acid sequence of human interleukin-1-gamma.
Interleukin-1-gamma, It-1-gamma, mouse, cytokine: IGIF, interleton-gamma:
induction; antikody: disposetto assay, fusion protofn, cotivity;
immunological disorder: allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel interferon gamma inducing factor 2—used to screen for compounds to diagnose, theat or prevent lissue damage associated with the comments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    10-JUL-1997.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A calculation of the amount and level. Antagonists of cost of the files, can be used in a method for treating a cused by human II. I damma The anthodies can also be used the acaps. The III. I damma protein can be covalently to a logochylese algority of a polypeptide, and the fusion of the pharmacoutical composition for supplying the action of the composition for supplying the action of the composition for supplying the action protein include immunological disorders, allogies, our issuesses. The II. I damma can also be used to detect the the protein or its recoptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    d human interleukin-l damma - used for treating out discordors caused by human [I] l-gamma | Latest 64-55; 64pp. English.

Section of represents human interleukin-l-gamma (II-l-gamma) | 185 the human equivalent of a mouse cytokine, IGIF, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               immunotherapeutics, antiviral agents and antimicrobial agents. The mutant IGIFs are also claimed to be useful for treating hepatitis, acquired immunodeficiency syndrome (AIDS), malaria, thereglosis, solid malignant tumbours (e.g. femal carcinoma), rheumatism, osteoporosis and thrombepenia caused by radiation—and chemo-therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       residues are replaced with different residues it is away from the consensus sequences shown in W48956-W4898. The mutant IGIFs are capable of stimulating immunocompetent cells for the production of interferen games and are claimed to be less todic, mor active and stable than the corresponding wild type IGIF. The movement is the area discretioned to enhance killer cell corrections and/or induce killer cell formation, and may therefore be useful as antitumour agents, antitumour agents, antitumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Mutants of interferon-gamma inducing polypeptide - useful as antitumour, antiviral, antimicrobial or anti-immunopathic agents Claim 3: pages 36-37: 59pp: English.
The present sequence represents the wild-type human interferon-gamma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Wild-type human interferon-gamma inducing factor. Interferon-gamma inducing factor, Interferon-gamma inducing factor, Interferon-gamma, killer cell; interferon-gamma inducing factor, Interferon-gamma, killer cell; interferon-gamma inducing factor, income, killer cell; interferon-gamma inducing cell; interferon-gamma inducing cell; interferon-gamma inducing cell; interferon-gamma inducing factor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (IEN.gamma) produc by immunocompetent cells is the product of a phage cDNA clone (T22411) derived from a bunna liver library.

FOR amplification of the cDNA (see also T22409 10) and expression in Escherichia coll XI I Blue MRF Kan allowed productor inducer protein. This was used to construct hybridoms H 1, which produced anti-TEN-gamma inducer protein monoclosed artibody H-ImAb, useful in the detection and purification of the inducer protein (see also R09558).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human interferon-gamma inducer protein.
Interferon gamma inducer protein, IFN-gamma; antiviral: virucide: antitumour; antibacterial; immunoregulator; adoptive _mmunotherapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                15 NOV 1994, UP-304203.

By immune appetent cells is the product of a cNA chame (IN24A) which from a human liver library. The protein enhances the exphonancity of killer cells and/or induces the formation of killer cells (c.a. M. cells, lymphokine-activating killer (IAK) cells, and hytotaxic Trocks). The mature protein (see also R9958) is useful as an antiviral antitumor, antibacterial, immunoregulatory and blood platelet enhancing agent, and can be used in adoptive immunotherapy. It is sequence 193 AA:

The present sequence represents a newel protein from human cells, which induces interference gamma (IRN wamma) production in immunocompetent cells. This protein enhances optoboxicity of killer cells and induces their formation. It is used as an antioncotic agent for antitumour immunotherapy, an antiviral (including anti-AIDS) or antibacterial agent, and in the treatment of atopic or immune system diseases, e.g. asthma, haytever or rheumalism, when formulated with interleukin-3, it is also used to treat leukopaenia and thromborytopaenia associated with radiotherapy or chemotherapy of leukaemia and other cancers. When used in antitumour immunotherapy of leukaemia and other cancers. When used immunotherapeutic effect of interleukin-2 (IL-2), compared with use of IL-2 alone—either when administered to the medium in which cells (intended for return to the patient) are being grown
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1: Page 9: 12pp: Japanese.
This sequence represents a protein which induces interferon-gamma production in immunocompetent cells. This protein may be used as production in immunocompetent the prevention and treatment of the major component in a drug for the prevention and treatment of e.g. maintaint tumours, Thrai diseases, bacterial infections and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI: 9
                                                                                                                                                                                                                                                                         Human protein that indeeds interferor-gamma prode in information color cells useful for adoptive immuno therapy of tumours and as antimicrobial agent etc.

                  Interferon gamma (IN yamma) production in immunocompetent cells. The pretein has high biological activity, including enhancing optomicity of killer cells and indiving Killer cell formation, in addition to inducing IEN gamma production by immunocompetent cells when expressed in mammalian cells, facilitating its use in low discages to treat/prevent, e.g. muliginant turnits. That or bacterial infections and immune diseases. As it is expressed in mammalian cells, it also has low toxicity when used in human treatments, minimising side effects. The DNA chooling the protein can be used in gene theretapy, e.g. by injecting vectors containing the UNA or transplanting cells.
